# CALCULATION POLICY

## The Viking Academy Trust

Schools in the Viking Academy Trust (VAT)

Chilton Primary School

Ramsgate Arts Primary School

Upton Junior School

This 'Calculation' policy is specifically for **Upton Junior School**.

### 1. Rationale:

At the Viking Academy Trust, we believe all employees must ensure their mathematical subject knowledge is relevant conditional to current methodologies and expectations in teaching mathematics.

### 2. Purpose:

To establish an accessible document that clearly outlines the progression through each of the four calculations within mathematics; addition, subtraction, multiplication and division. With the help of concrete, pictorial and abstract representations, teachers are able to use this document in order to plan a succession of effective lessons regarding the conceptualised teaching and learning of calculation.

### 3.1 Guidelines:

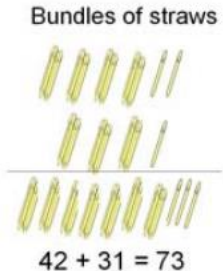

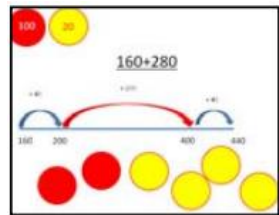

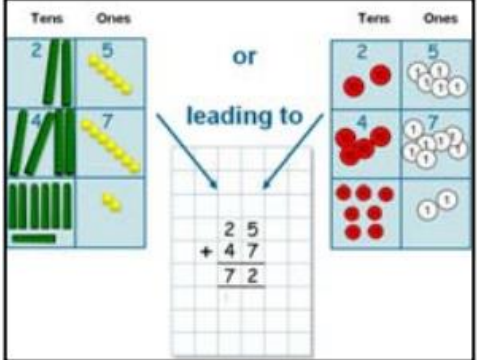

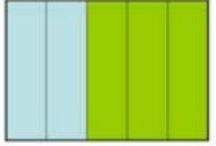

This policy is separated firstly into the four calculations and then additionally by year group in order to show a clear route of development through years 3 to 6 in addition, subtraction, multiplication and division; including the expected formal abstract written methods, visual representations and links to other areas of the curriculum.

This policy should be used alongside other school mathematics initiatives such as **Primary Advantage Maths** in which a further wealth of concrete, pictorial and abstract representations of the four calculations can be found.

### 3.2 Formal written method guidance:

	Year 3	Year 4	Year 5	Year 6
Addition	<p>Column method without exchanging (up to <b>3</b> digits)</p> <p>Begin exchanging when appropriate.</p>	<p>Column method with exchanging (up to <b>4</b> digits)</p>	<p>Column method with exchanging (up to <b>4</b> digits and beyond)</p> <p>Decimals - with the <b>same</b> amount of decimal places.</p>	<p>Column method with exchanging (up to <b>4</b> digits and beyond)</p> <p>Decimals - with <b>different</b> amounts of decimal places.</p>
Subtraction	<p>Column method without exchanging (up to <b>3</b> digits)</p> <p>Begin exchanging when appropriate.</p>	<p>Column method with exchanging (up to <b>4</b> digits)</p>	<p>Column method with exchanging (up to 4 digits and beyond)</p> <p>Decimals - with the <b>same</b> amount of decimal places.</p>	<p>Column method with exchanging (up to 4 digits and beyond)</p> <p>Decimals - with <b>different</b> amounts of decimal places.</p>
Multiplication	<p>Counting in multiples.</p> <p>Repeated addition.</p> <p>Arrays - showing commutativity.</p> <p>Partitioning using the <b>grid method</b>.</p>	<p><b>Column</b> (vertical) multiplication</p> <p>(2 and 3 digit multiplied by 1 digit)</p>	<p><b>Column</b> (vertical) multiplication</p> <p>Long multiplication</p> <p>(up to 4 digit multiplied by 1 or 2 digits)</p>	<p><b>Column</b> (vertical) multiplication</p> <p>Long multiplication</p> <p>(multi digit up to 4 digits multiplied by 2 digits)</p>
Division	<p>Division with arrays.</p> <p>Division with a remainder.</p> <p><b>Short division</b> (2 digit by 1 digit)</p>	<p>Division with arrays.</p> <p>Division with a remainder.</p> <p><b>Short division</b> (up to 3 digits by 1 digit)</p>	<p><b>Short division</b></p> <p>(Up to 4 digits by 1 digit)</p> <p>Remainders can be interpreted in different ways.</p>	<p><b>Short division</b></p> <p><b>Long division</b></p> <p>(Up to 4 digits by 2 digits)</p> <p>Remainders interpreted as whole numbers, fractions or round.</p>

# Upton Calculation Policy for addition: YEAR 4

Mental calculations

Practise mental methods with increasingly large numbers.

See year 3 guidance

Consolidate partitioning and re-partitioning

Use compensation for adding too much/little and adjusting.

Use straws, Dienes, place value counters,

Empty number lines etc.

**Common mental calculation strategies:**

Partitioning and recombining

Doubles and near doubles

Use number pairs to 10 and 100

Adding near multiples of ten and adjusting

Using patterns of similar calculations

Using known number facts

Bridging through ten and hundred

Complementary addition (mental number line)

I know that  $63 + 29$  is the same as  $63 + 30 - 1$

$$\begin{aligned} 55 + 37 &= 55 + 30 + 7 \\ &= 85 + 7 \\ &= 92 \end{aligned}$$

Written calculations

Add numbers with up to four digits, using the column method.

Include decimal addition for money.

789 + 642 becomes

7 8 9
+ 6 4 2
-----
1 4 3 1
1 1
-----
1 4 3 1

Answer: 1431

Supporting representations

Use a range of concrete, pictorial and abstract representations, including those below.

£12.32
+ £11.81
-----
£24.13
1

$0 + 50 + 3$
$10 + 40 + 3$
$20 + 30 + 3$
$30 + 20 + 3$
$40 + 10 + 3$
$50 + 0 + 3$

Re-partitioning

Place value cards & counters to counters, support the expanded method in readiness for the column

What is the same and what is different about all these methods?

Fractions

Addition of fractions with the **same denominator** bridging whole numbers.

Counting using simple fractions and decimals, both forwards and backwards.

$$\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = 1$$

Links from other strands

Pupils should estimate the answers to a calculation and use inverse operations to check answers.

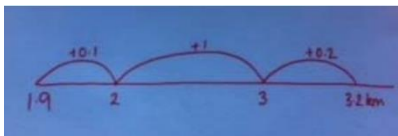

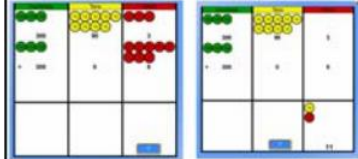

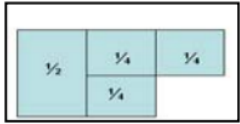

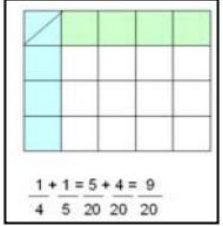

Add amounts of money using both pounds (£) and pence (p) in practical and appropriate contexts.

Measure, compare and add lengths (m/cm/mm), mass (kg/g) and volume/capacity (l/ml).

Calculate the perimeter of composite rectilinear shapes using different units of measurement.

Solve addition two step problems in context, deciding which operation and methods to use and why.

# Upton Calculation Policy for addition: YEAR 5

Mental calculations	<p>Add numbers mentally with increasingly large numbers, e.g. <math>12,462 + 2,300 = 14,762</math>  Mentally add tenths, and one-digit numbers and tenths.  Add decimals, including a mix of whole numbers and decimals, decimals with different numbers of places, and complements of 1 (e.g. <math>0.67 + 0.33 = 1</math>)</p> <p>Children use representation of choice  Refer back to pictorial and physical representations when needed.</p> <p><i>See years 3 and 4 guidance for further scaffolding of less able.</i></p>	<p><b>Common mental calculation strategies:</b>  Partitioning and recombining  Doubles and near doubles  Use number pairs to 10 and 100  Adding near multiples of ten and adjusting  Using patterns of similar calculations  Using known number facts  Bridging through ten and hundred  Complementary addition (mental number line)</p>
Written calculations	<p>Add numbers with up to four digits (or more than four if exceeding), using the column method.</p> <p>Include decimal addition for money.</p>	<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <math display="block">\begin{array}{r} 24172m \\ + 5929m \\ \hline 30101m \\ \hline 1111 \end{array}</math> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <math display="block">\begin{array}{r} £563.14 \\ + £207.88 \\ \hline £771.02 \\ \hline 111 \end{array}</math> </div> </div>
Supporting representations	<p>Use a range of concrete, pictorial and abstract representations, including those below.</p> <div style="display: flex; align-items: flex-start;"> <div style="border: 1px solid black; padding: 5px; margin-right: 20px;"> <math display="block">\begin{aligned} 12\,462 + 2300 \\ = 12\,462 + 2000 + 300 \\ = 14\,462 + 300 \\ = 14\,762 \end{aligned}</math> <p style="text-align: center; margin-top: 5px;">Partitioning and recombining</p> </div> <div style="border: 1px solid black; border-radius: 15px; padding: 10px; margin-right: 20px; background-color: #fff9c4;"> <p style="text-align: center;">What is the same and what is different about all these methods?</p> </div> <div style="text-align: center;">  <p style="margin-top: 5px;">Jottings to support mental calculations</p> </div> </div>	<p>Place Value counters to support column addition</p> <div style="display: flex; align-items: center;">  <div style="margin-left: 20px;"> <math display="block">\begin{array}{r} 393 \\ + 308 \\ \hline 1 \\ \hline 1 \end{array}</math> </div> </div>
Fractions	<p>Addition of fractions with the <b>same denominator</b> and <b>denominators that are multiples of the same number</b> (to become fluent through a variety of increasingly complex problems and add fractions that exceed 1 as a mixed number).</p> <p>Counting using simple fractions and decimals, both forwards and backwards.</p>	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; padding: 5px;"> <math display="block">\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = 1</math> </div> <div style="border: 1px solid black; padding: 5px;">  </div> <div style="border: 1px solid black; padding: 5px;">  <p style="text-align: center; margin-top: 5px;"><math>\frac{1}{4} + 1 = 5 + 4 = 9</math> 4 5 20 20 20</p> </div> </div>
Links from other strands	<p>Pupils should solve problems involving up to three decimal numbers.</p> <p>Solve addition and subtraction multi-step problems in context, deciding which operations and methods to use and why.</p> <p>Use all four operations to solve problems involving measure (e.g. length, mass, volume/capacity, money, duration) using decimal notation.</p> <p>Calculate the perimeter of composite rectilinear shapes using different units of measurement.</p> <p>Use angle sum facts and other properties to make deductions about missing angles.</p> <p>Solve comparison, sum and difference problems using information presented in a line graph.</p>	

# Upton Calculation Policy for addition: YEAR 6

Mental calculations	<p><b>Perform mental calculations, including with mixed operations and large numbers (more complex calculations)</b></p> <p>Children use representation of choice.                  Consolidate partitioning and re-partitioning.                  Use compensation for adding too much/little and adjusting.                  Refer back to pictorial and physical representations when needed.</p> <p><i>See years 3, 4 and 5 guidance for further scaffolding of less able.</i></p>	<p><b>Common mental calculation strategies:</b>                  Partitioning and recombining                  Doubles and near doubles                  Use number pairs to 10 and 100                  Adding near multiples of ten and adjusting                  Using patterns of similar calculations                  Using known number facts                  Bridging through ten and hundred                  Complementary addition (mental number line)</p>
Written calculations	<p><b>Add larger numbers using the column method.</b></p> <p>Include decimal addition for money.</p>	<div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <math display="block">\begin{array}{r} 24172\text{m} \\ + 5929\text{m} \\ \hline 30101\text{m} \\ \hline 1111 \end{array}</math> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <math display="block">\begin{array}{r} \text{£}563.14 \\ + \text{£}207.88 \\ \hline \text{£}771.02 \\ \hline 111 \end{array}</math> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>789 + 642 becomes</p> <math display="block">\begin{array}{r} 789 \\ + 642 \\ \hline 1431 \\ \hline 11 \\ \hline \text{Answer: 1431} \end{array}</math> </div> </div>
Supporting representations	<p>Use a range of concrete, pictorial and abstract representations, including those below.</p>	<div style="display: flex; justify-content: space-between;"> <div style="border: 1px solid black; padding: 5px; width: 25%;"> <math display="block">\begin{aligned} 12\,462 + 2300 \\ = 12\,462 + 2000 + 300 \\ = 14\,462 + 300 \\ = 14\,762 \end{aligned}</math> <p style="text-align: center; font-size: small;">Partitioning and recombining</p> </div> <div style="border: 1px solid black; padding: 5px; width: 25%; text-align: center;"> </div> <div style="border: 1px solid black; padding: 5px; width: 25%;"> <math display="block">234\text{ kg} + 49\text{ kg} = 273\text{ kg}</math> <math display="block">\begin{array}{r} 200 + 30 + 4 \\ 40 + 9 \\ \hline 200 + 70 + 13 \end{array}</math> </div> <div style="border: 1px solid black; border-radius: 50%; padding: 10px; width: 25%; text-align: center; color: black;"> <p>What is the same and what is different about all these methods?</p> </div> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px; text-align: center;"> <p>Place Value counters to support column addition</p> <math display="block">\begin{array}{r} 393 \\ + 308 \\ \hline 111 \end{array}</math> </div> <div style="border: 1px solid black; border-radius: 50%; padding: 10px; margin-top: 10px; text-align: center;"> <p>I can explain my method using place value counters.</p> </div>
Fractions	<p><b>Addition of fractions with different denominators and mixed numbers, using the concept of equivalent fractions.</b></p> <p>Start with fractions where the denominator of one fraction is a multiple of the other (e.g. <math>\frac{1}{2} + \frac{1}{8} = \frac{5}{8}</math>) and progress to varied and increasingly complex problems.</p> <p>Practise calculations with simple fractions and decimal equivalents to aid fluency.</p>	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; padding: 5px;"> <p style="font-size: small;"><math>\frac{2}{5}</math></p> </div> <div style="border: 1px solid black; padding: 5px;"> <p style="font-size: small;"><math>\frac{3}{5}</math></p> </div> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px; text-align: center;"> <math display="block">\frac{2}{5} + \frac{3}{5} = \frac{5}{5} = 1</math> </div>
Links from other strands	<p>Pupils should use their knowledge of the order of operations to carry out calculations involving the four operations (BIDMAS).</p> <p>Solve problems involving all four operations.</p> <p>Algebra: use symbols and letters to represent variables and unknowns e.g. <math>a + b = b + a</math></p> <p>Solve problems involving the calculation and conversions of units of measure, using decimal notation of up to three decimal places where appropriate.</p> <p>Using the number line, pupils use, add and subtract positive and negative integers for measures such as temperature.</p> <p>Calculate and interpret the mean as an average.</p> <p>Interpret and construct pie charts and line graphs and use these to solve problems</p> <p>Find missing angles, and express geometry relationships algebraically (e.g. <math>d=2xr</math>)</p>	

# Upton Calculation Policy for subtraction: YEAR 3

Mental calculations	<p><b>Add and subtract numbers mentally, including:</b></p> <ul style="list-style-type: none"> <li>- A three-digit number and ones</li> <li>- A three-digit number and tens</li> <li>- A three-digit number and hundreds</li> </ul> <p>Use a number line, Dienes, hundred squares, two-hundred squares and similar representations to support mental calculations.</p>	<p><b>Common mental calculation strategies:</b></p> <ul style="list-style-type: none"> <li>Find differences by counting up</li> <li>Partitioning</li> <li>Applying known facts</li> <li>Bridging through 10 and multiples of 10</li> <li>Subtracting 9, 11 etc. by compensating</li> <li>Counting on to, or back from the largest number</li> </ul>	
Written calculations	<p><b>Subtract numbers with up to three digits, using formal written methods of columnar subtraction.</b></p>		
	<p>(1) Extended columnar - no exchange</p> <p><u>Extended method</u> <math>87 - 53 =</math></p> $\begin{array}{r} 80 \text{ and } 7 \\ - 50 \text{ and } 3 \\ \hline 30 \text{ and } 4 = 34 \end{array}$	<p>(2) Extended columnar - with exchange:</p> $\begin{array}{r} 70 + 17 \\ - 50 + 8 \\ \hline 20 + 9 \end{array}$	
Supporting representations	<p>Partitioning and re-partitioning support the understanding of place value.</p>		
			<p>All of these representations still comprise the amount of 36.</p>
	<p>Introduce transition from concrete place value representations (e.g. Dienes or straws), to pictorial - such as place value counters or money.</p>		
	<p style="text-align: center;">132 in Dienes</p>	<p style="text-align: center;">132 in place value counters</p>	<p>Revert to concrete manipulatives and expanded methods when difficulties arise.</p>
Fractions	<p>Count up and down in tenths.</p> <p>Add and subtract fractions with the same denominator within one whole.</p>		
	<p style="text-align: center;">Adding Fractions</p> <p style="text-align: center;">Bar model</p>	$\frac{3}{4} - \frac{2}{4} = \frac{1}{4}$	
Links from other strands	<p>Add and subtract amounts of money to give change, using both pounds (£) and pence (p) in practical contexts.</p> <p>Compare durations of events, for example calculating the time taken by particular events or tasks.</p>		

# Upton Calculation Policy for subtraction: YEAR 4

Mental calculations

Continue to practise mental methods with increasingly large numbers to aid fluency.

Find small differences by counting up  
e.g. 5003-4996  
Subtract nearest multiple of ten and adjust.  
Partition larger numbers.

Encourage children to use visualisations, such as number lines, wherever possible.

This could be done using an empty number line. Children should recall and use number facts to reduce the number of steps.

Written calculations

Subtract numbers with up to four digits, using formal written methods of columnar subtraction. Build on formal, extended method (see year 3) using exchange wherever necessary. Continue to use representations and manipulatives to develop understanding of place value.

$$372 - 147 =$$

$$\begin{array}{r} 300 + 70 + 2 \\ -100 + 40 + 7 \\ \hline \end{array} \quad \longrightarrow \quad \begin{array}{r} 300 + 60 + 12 \\ -100 + 40 + 7 \\ \hline 200 + 20 + 5 \end{array} \quad \longrightarrow \quad \begin{array}{r} 300 + \overset{60}{\cancel{70}} + \overset{1}{2} \\ -100 + 40 + 7 \\ \hline 200 + 20 + 5 \end{array}$$

Apply understanding of subtraction with larger integers to that of decimals in context of money and measures. (See Year 5.)

Supporting representations

Use a range of concrete, pictorial and abstract representations, including those below. Dienes blocks and place value counters can be used effectively to model calculations and underlying concepts.

Use physical and/or pictorial representations and expanded algorithms **alongside** columnar methods. Ask: *what is the same? What's different?* Compare and discuss the suitability of different methods in context.  
**Pupils decide which operations and methods to use and why.**

"I would count on a number line to calculate 5003-4896; because the numbers are close together."

Fractions

Count up and down in hundredths  
Add and subtract fractions with the same denominator.  
Solve simple measure and money problems involving fractions and decimals to two decimal places.

Links from other strands

Identify, represent and estimate numbers using different representations (place value).  
Estimate and use inverse operations to check answers to a calculation.  
Solve addition and subtraction two-step problems in contexts, deciding which operations and methods to use and why.  
Estimate, compare and calculate different measures, including money in pounds and pence.

# Upton Calculation Policy for subtraction: YEAR 5

Mental calculations	<ul style="list-style-type: none"> <li>- Subtract numbers mentally with increasingly large numbers. e.g. <math>12,462 - 2300 = 10,162</math></li> <li>- Use rounding to check answers to calculations and determine, in context of a problem, levels of accuracy.</li> <li>- Pupils practise subtracting decimals, including a mix of whole numbers and decimals, decimals with different numbers of decimal places, and complements of 1 e.g. <math>1 - 0.17 = 0.83</math></li> <li>- Pupils mentally subtract tenths, and one-digit whole numbers and tenths.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px; text-align: center;"> <p>Children use or visualise representations of their choice. Refer back to physical representations as required.</p> </div>	<p><b>Common mental calculation strategies:</b>          Find differences by counting up          Partitioning          Applying known facts          Bridging through 10 and multiples of 10          Subtracting 9, 11 etc. by compensating          Counting on to, or back from the largest number</p>														
Written calculations	<p><b>Subtract whole numbers with more than four digits using the formal written columnar method. Practise subtracting numbers including decimals.</b></p> <p>(See year 4) compare physical and/or pictorial representations and expanded algorithms alongside columnar methods. Ask the children what's the same and different?          Compare and discuss the suitability of different methods (mental or written), in context.          Revert to expanded methods whenever difficulties arise.</p> <div style="text-align: center; margin: 10px 0;"> <div style="border: 1px solid black; padding: 5px; display: inline-block; margin-bottom: 5px;"><math>£17.34 - £12.16</math></div> <div style="margin: 0 20px;">→</div> <table style="border-collapse: collapse; text-align: center;"> <tr><td style="padding: 0 5px;">1000+700+20+14p</td><td style="padding: 0 5px;">→</td><td style="padding: 0 5px;"><math>\begin{array}{r} 1734p \\ - 1216p \\ \hline 518p \end{array}</math></td><td style="padding: 0 5px;">→</td><td style="padding: 0 5px;"><math>\begin{array}{r} £ 2 \\ 17.34 \\ - 12.16 \\ \hline 5.18 \end{array}</math></td></tr> <tr><td style="padding: 0 5px;"><math>- 1000+200+10+ 6p</math></td><td></td><td></td><td></td><td style="padding: 0 5px;"><math>- 12.16</math></td></tr> <tr><td style="padding: 0 5px;"><math>\underline{500+10+ 8p}</math></td><td></td><td></td><td></td><td style="padding: 0 5px;"><math>\underline{5.18}</math></td></tr> </table> </div> <div style="margin-top: 10px;"> <div style="border: 1px solid purple; border-radius: 15px; padding: 5px; display: inline-block;"> <p style="color: purple;">What is the same about these models? What's different?</p> </div> <div style="border: 1px solid orange; padding: 5px; margin-top: 10px; display: inline-block;"> <p>Relate place value of decimals with that of whole numbers using representations. 1000+700+20+14p	→	$\begin{array}{r} 1734p \\ - 1216p \\ \hline 518p \end{array}$	→	$\begin{array}{r} £ 2 \\ 17.34 \\ - 12.16 \\ \hline 5.18 \end{array}$												
$- 1000+200+10+ 6p$				$- 12.16$												
$\underline{500+10+ 8p}$				$\underline{5.18}$												
Supporting representations	<p>Use a range of concrete, pictorial and abstract representations, including those below. Stress the place value relationships between money, decimals and whole numbers. Extended place value mats can be used, moving away from the traditional 'Hundreds, Tens and Ones' used in lower KS2.</p>															
Fractions	<p>Subtract fractions with the same denominators and denominators that are multiples of the same number. (Include fractions exceeding 1 as a mixed number).          Solve measure and money problems involving fractions and decimals to three decimal places.          Mentally subtract tenths/hundredths, and one-digit whole numbers and tenths/hundredths.</p>															
Links from other strands	<p>Solve problems involving addition, subtraction, multiplication and division and a combination of these, including truly understanding the meaning of the equals sign.          Use all four operations to solve problems involving time, money and measure using decimal notation up to 3 decimal places.</p>															

# Upton Calculation Policy for subtraction: YEAR 6

Mental calculations

- Perform mental calculations, including with mixed operations, increasingly large numbers and complex calculations.
- Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy.

**Common mental calculation strategies:**  
 Find differences by counting up  
 Partitioning  
 Applying known facts  
 Bridging through 10 and multiples of 10  
 Subtracting 9, 11 etc. by compensating  
 Counting on to, or back from the largest number

Children use or visualise representations of their choice.  
Refer back to physical representations as required.

Written calculations

**Subtract whole numbers with more than four digits using the formal written columnar method. Practise subtracting numbers including decimals.**

(See year 3, 4 and 5) compare physical and/or pictorial representations and expanded algorithms alongside columnar methods. Ask the children what's the same and different?  
 Compare and discuss the suitability of different methods (mental or written), in context.  
 Revert to expanded methods whenever difficulties arise.

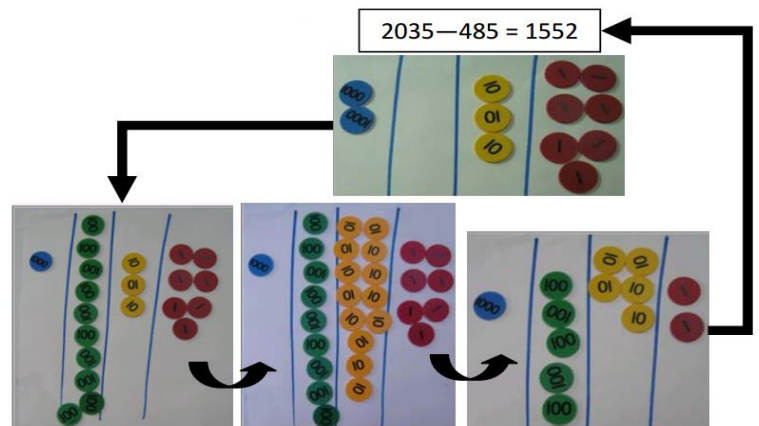

Consolidate columnar methods, paying attention to the occurrence of zeros as placeholders.

Supporting representations

Use a range of concrete and pictorial representations alongside the column method when needed. *What is the same? What is different?*

Fractions

Subtract fractions with different denominators and mixed numbers. Practise calculations with simple fractions and decimal fraction equivalents to aid **fluency**.

Links from other strands

Use their knowledge of the order of operations to carry out calculations involving the four operations (BIDMAS)  
 Solve problems involving all four operations.  
 Algebra: use symbols and letters to represent variable and unknowns e.g.  $a + b = b + a$   
 Using the number line, pupils use, add and subtract positive and negative integers for measures such as temperature.

# Upton Calculation Policy for multiplication: YEAR 3

Mental calculations

Recall and use multiplication and division facts for the 3, 4 and 8 times tables. Children should draw on year 2 understanding of 2, 5 and 10 times tables. Use doubling to connect 2, 4 and 8 times tables. Develop efficient mental methods using commutativity and associativity. Derive related multiplication and division facts.

**The associative law:**  
 $4 \times 12 \times 6 = 4 \times 5 \times 12$   
 $= 20 \times 12$   
 $= 240$

**Calculate mathematical statements for multiplication using the multiplication tables they know, including for two-digit numbers times one-digit numbers, using mental methods.**

**The commutative law:**  
 $4 \times 12 = 12 \times 4$

Partitioning: multiply the tens first and then multiple the units, e.g.  $57 \times 4 = (50 \times 4) + (7 \times 4) = 200 + 28 = 228$ .

Children can apply these skills to solve spoken word problems too, including missing number statements e.g.  $72 \div \_ = 8$

'I have 8 packets, each containing 12 crayons. How many crayons do I have in total?'

Ensure opportunities to learn multiplication tables through use of **visual models**, images and also rote learning.

**Deriving related facts:**  
 $3 \times 2 = 6, 6 \div 3 = 2, 6 \div 2 = 3$   
 $30 \times 2 = 60, 60 \div 3 = 20, 60 \div 2 = 30$

**Multiplication and division facts:**  
 $8 \times 4 = 32, 4 \times 8 = 32, 32 \div 8 = 4,$   
 $32 \div 4 = 8$

Written calculations

**Write and calculate mathematical statements for multiplication using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, progressing to formal written methods.**

Estimate before calculating to develop number fluency. Ensure written methods build on or relate to mental methods.

Towards the column method ...

x	20	4
6	120	24

$120 + 24 = 144$

$$\begin{array}{r} 24 \\ \times 6 \\ \hline 120 \\ 24 \\ \hline 144 \end{array}$$

$24 \times 6$  becomes

x	2	4
6	12	24

Answer: 144

Supporting representations

$5 \times 3$

$3 \times 5$

3 groups of 40

10p 9p

$13p \times 3 = 10p \times 3 + 3p \times 3 = 30p + 9p = 39p$

I can see eight groups of seven!

I can see seven, eight times!

And seven groups of eight!

Use arrays for partitioning too

$19 \times 3 = 57$ :  $3 \times \frac{10}{30} + \frac{9}{27} = 57$

**2 digit x 1 digit number:**  
 e.g.  $7 \times 38 = 266$

x	30	8
7	210	56

$210 + 56 = 266$

Fractions

Recognise and show, using diagrams, equivalent fractions with small denominators.

1	2	3	4	5	6	7	8	9	10
2	4	6	8	10	12	14	16	18	20
3	6	9	12	15	18	21	24	27	30
4	8	12	16	20	24	28	32	36	40
5	10	15	20	25	30	35	40	45	50

$\frac{1}{2}$

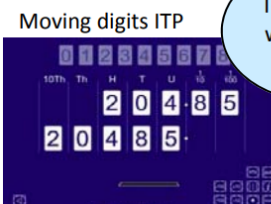

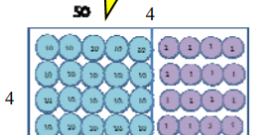

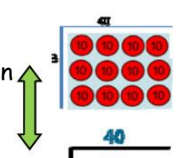

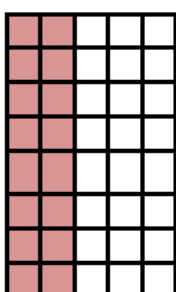

$\frac{2}{4}$

$\frac{4}{8}$

Links from other strands

**Solve problems, including missing number problems, involving multiplication, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.** The comparison of measures includes simple scaling by integers, e.g. a given measurement or quantity is twice as long or five times as high. Pupils now use multiples of 2, 3, 4, 5, 8, 10, 50 and 100. Pupils understand and use simple scales in pictograms and bar charts with increasing accuracy.

# Upton Calculation Policy for multiplication: YEAR 4

Mental calculations	<p>Recall multiplication and division facts for multiplication tables up to <math>12 \times 12</math></p> <p>Use place value, known and derived facts to multiply and divide mentally, including:</p> <p style="margin-left: 20px;"> <b>Multiplying by 0 and 1;</b>  <b>Dividing by 1;</b>  <b>Multiplying three numbers together.</b> </p> <p>Recognise and use factor pairs and commutativity in mental calculations.</p> <p>Practise mental methods and extend this to three-digit numbers to derive facts, (for example <math>600 \div 3 = 200</math> can be derived from <math>2 \times 3 = 6</math>)</p>	<p>The associative law: <math>(2 \times 3) \times 4 = 2 \times (3 \times 4)</math></p> <p>The distributive law: <math>39 \times 7 = 30 \times 7 + 9 \times 7</math></p>	<p>Using facts and rules: <math>2 \times 6 \times 5 = 10 \times 6 = 60</math></p>										
Written calculations	<p>Multiply two-digit and three-digit numbers by a one-digit number using a formal written layout.</p> <p>Estimate before calculating to develop number fluency.</p> <p>Ensure written methods build on or relate to mental methods.</p> <p>Introduce the grid method alongside expanded column methods.</p>	<p><b>Key skills to support:</b></p> <ul style="list-style-type: none"> <li>- Know or quickly recall multiplication facts up to <math>12 \times 12</math>.</li> <li>- Understand the effect of multiplying numbers by 10, 100 or 1000.</li> <li>- Multiply multiples of 10, for example, <math>20 \times 40</math></li> <li>- Approximate, e.g. recognise that <math>72 \times 38</math> is approx. <math>70 \times 40</math>.</li> </ul>											
Supporting representations	<p>Ensure children can confidently multiply and divide by 10 and 100, that multiplying by 10 makes the number bigger and all digits move one place to the left, while dividing does the opposite.</p>	<p>Moving digits ITP</p> 	<p><math display="block">\begin{array}{r} 245 \\ \times 6 \\ \hline 1470 \end{array}</math></p> <p>This digit is worth 30</p> <p>I can use place value counters to model the grid method</p> 										
Fractions	<p>Use arrays made with place value counters to demonstrate the link between multiplication and division. This will support the understanding of the grid method.</p> 	<p>Children need to understand and apply the language of multiples and factors and use it in solving multiplication and division problems, for example, 'all factors of 36 are multiples of 2, true or false? Find two factors of 48 that are also multiples of 3.'</p>											
Links from other strands	<p>Recognise and show, using diagrams, families of common equivalent fractions.</p> <p>Understand the relation between non-unit fractions and multiplication and division of quantities, with particular emphasis on tenths and hundredths.</p> <p>Make connections between fractions of a length, of a shape and as a representation of one whole or set of quantities.</p> <p>Use factors and multiples to recognise equivalent fractions and simplify where appropriate.</p>	<div style="display: flex; align-items: center;"> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td><math>\frac{4}{10}</math></td><td><math>\frac{6}{15}</math></td><td><math>\frac{8}{20}</math></td><td><math>\frac{10}{25}</math></td><td><math>\frac{12}{30}</math></td><td><math>\frac{14}{35}</math></td><td><math>\frac{16}{40}</math></td></tr> </table> <table border="1" style="border-collapse: collapse; text-align: center; margin-left: 10px;"> <tr><td><math>\frac{2}{5}</math></td><td>=</td><td><math>\frac{16}{40}</math></td></tr> </table> </div> 		$\frac{4}{10}$	$\frac{6}{15}$	$\frac{8}{20}$	$\frac{10}{25}$	$\frac{12}{30}$	$\frac{14}{35}$	$\frac{16}{40}$	$\frac{2}{5}$	=	$\frac{16}{40}$
$\frac{4}{10}$	$\frac{6}{15}$	$\frac{8}{20}$	$\frac{10}{25}$	$\frac{12}{30}$	$\frac{14}{35}$	$\frac{16}{40}$							
$\frac{2}{5}$	=	$\frac{16}{40}$											
Links from other strands	<p>Solve problems, including missing number problems, involving multiplication, including positive integer scaling problems and correspondence problems in which <math>n</math> objects are connected to <math>m</math> objects.</p> <p>Convert between different units of measure (e.g. km to m)</p> <p>Relate area to arrays and multiplication</p> <p>Pupils understand and use a greater range of scales in their representations (statistics)</p>												

# Upton Calculation Policy for multiplication: YEAR 5

Mental calculations

Multiply and divide numbers mentally drawing upon known facts.  
 Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000.  
 Recognise and use square and cube numbers (and notation)

$24 \times 15 = ?$

Pupils should be taught throughout that percentages, decimals and fractions are different ways of expressing proportions.

**Spider diagrams**

$42 \div 6 =$      $0.7 \times 6 = 4.2$      $0.07 \times 6 =$   
 $4.2 \div 6 =$      $7 \times 6 = 42$      $0.007 \times 6 =$

To be successful at multiplying decimal numbers using a written method, children need to be completely secure in using known multiplication facts to derive linked decimal facts. Spider diagrams provide a visual way of recording these facts.

I did:  $24 \times 5 = 120$  (half of  $24 \times 10$ ), then multiplied 120 by 3 to get 360

I did:  $(24 \times 10) + (24 \times 5)$ .

Example of constructing equivalence statements:  
 $4 \times 35 = 2 \times 2 \times 35$ ;  
 $3 \times 270 = 3 \times 3 \times 9 \times 10 = 92 \times 10$

Written calculations

Multiply numbers up to 4 digits by a one-digit or two-digit numbers using a formal written method, including long multiplication for two-digit numbers.

$24 \times 16$  becomes  
 $124 \times 26$  becomes  
 $2741 \times 6$  becomes

Compact methods for multiplication are efficient but often do not make the value of each digit explicit. When introducing multiplication of decimals, it is sensible to take children back to an expanded form, such as the grid method where the value of each digit is clear, to ensure that the children understand the process.

Supporting representations

	3000	500	60	7	
20	60000	10000	1200	140	71340
4	12000	2000	240	28	14268
					Total 85608

What is the same and what is different about these two methods?

To start multiplying using the **least significant digit** for the grid method will support children with implementation of the written procedure.

Build on children's understanding: demonstrate multiplication of a decimal number alongside its whole number equivalent

$326$	$3.26$
$\times 8$	$\times 8$
$2400$	$24.00$
$160$	$1.60$
$48$	$0.48$
$2608$	$26.08$

Fractions

Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams. Identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths.

Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This related to scaling by simple fractions, including fractions  $> 1$ .

$\frac{1}{4} \times \frac{1}{2}$

Scaling by  $\frac{1}{2}$   
 "finding a half of a quarter"

$\frac{1}{2} \times \frac{1}{4}$

" $\frac{1}{2}$  of a  $\frac{1}{2}$ ": find a  $\frac{1}{2}$ , then divide it by 4.

Encourage children to draw diagrams to represent situations or problems involving fractions. Model how to do this, for example:

$\frac{2}{5}$  of a number is 20. What is the number?  $\frac{10}{20}$  Whole=50

Links from other strands

Identify multiples & factors, including finding all factor pairs of a number, & common factors of two numbers.  
 Know and use the vocabulary of prime numbers, prime factors and composite (non-prime). Establish whether a number up to 100 is prime and recall prime numbers up to 19.  
 Solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes, and including understanding the meaning of the equals sign. Use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.  
 Convert between different units of metric measure; problems including money.  
 Other links: ratio.

# Upton Calculation Policy for multiplication: YEAR 6

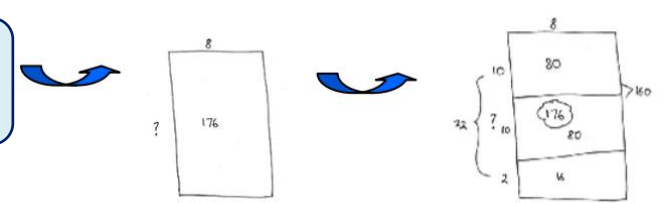

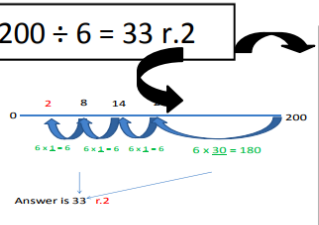

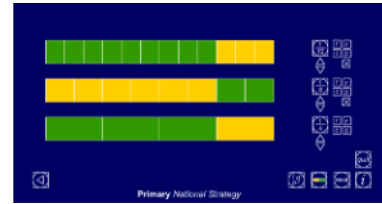

Mental calculations	<p>Perform mental calculations, including with mixed operations and large numbers (<i>increasingly large numbers and more complex calculations</i>).</p> <p>Use all the multiplication tables to calculate mathematical statements in order to maintain fluency.</p> <p>Use estimation to check answers to calculations.</p> <p>Multiply numbers by 10, 100 and 1000 giving answers up to three decimal places.</p>	<p>Use mental strategies to solve problems e.g.                  X4 by doubling and doubling again.                  X5 by x10 and halving.                  X20 by x10 and doubling.                  X9 by multiplying by 10 and adjusting.                  X6 by multiplying by 3 and doubling.</p>															
	Children should know the square numbers up to $12 \times 12$ and derive the corresponding squares of multiples of 10 e.g. $80 \times 80 = 6400$	What is the best approximation for $4.4 \times 18.6$ ?															
Written calculations	<p>Multiply multi-digit numbers up to 4 digits by a two-digit number using a formal written method, including long multiplication.</p> <p>Multiply one-digit numbers with up to two decimal places by whole numbers.</p>	<table style="font-family: monospace; border-collapse: collapse; width: 100%;"> <tr><td style="border-right: 1px solid black; padding: 2px;">£</td><td style="padding: 2px;">6.23</td></tr> <tr><td style="border-right: 1px solid black; padding: 2px;">x</td><td style="padding: 2px;">27</td></tr> <tr><td style="border-right: 1px solid black; padding: 2px;"></td><td style="padding: 2px;">43.61</td></tr> <tr><td style="border-right: 1px solid black; padding: 2px;"></td><td style="padding: 2px;">124.60</td></tr> <tr><td style="border-right: 1px solid black; padding: 2px;">£</td><td style="padding: 2px;">168.21</td></tr> </table>	£	6.23	x	27		43.61		124.60	£	168.21					
£	6.23																
x	27																
	43.61																
	124.60																
£	168.21																
	Refer to year 3, 4 and 6 guides if children find formal calculation methods difficult.																
Supporting representations	<p>Look at long-multiplication calculations containing errors, identify the errors and determine how they should be corrected.</p>	<table style="margin: 0 auto;"> <tr> <td style="border: 1px solid black; padding: 2px;">x</td> <td style="border: 1px solid black; padding: 2px;">8</td> <td style="border: 1px solid black; padding: 2px;">0.4</td> <td style="border: 1px solid black; padding: 2px;">0.06</td> <td style="padding: 0 10px;">=</td> <td style="border: 1px solid black; padding: 2px;">93.06</td> </tr> <tr> <td style="border: 1px solid black; padding: 2px;">11</td> <td style="border: 1px solid black; padding: 2px;">88</td> <td style="border: 1px solid black; padding: 2px;">4.4</td> <td style="border: 1px solid black; padding: 2px;">0.66</td> <td colspan="2"></td> </tr> </table> <table style="margin: 0 auto;"> <tr><td style="padding: 2px;">8.46</td></tr> <tr><td style="padding: 2px;">x 11</td></tr> <tr><td style="padding: 2px;">93.06</td></tr> </table>	x	8	0.4	0.06	=	93.06	11	88	4.4	0.66			8.46	x 11	93.06
x	8	0.4	0.06	=	93.06												
11	88	4.4	0.66														
8.46																	
x 11																	
93.06																	
		What's the same? What's different?															
Fractions	<p>Multiply simple pairs of proper fractions, writing the answer in its simplest form e.g. <math>\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}</math></p> <p>Three key applications of understanding:</p> <ul style="list-style-type: none"> <li>Recognise that <math>\frac{1}{4}</math> of 12, <math>\frac{1}{4} \times 12</math> and 12 divided by 4 are equivalent</li> <li>Use cancellation to simplify the product of a fraction and an integer e.g. <math>\frac{1}{2} \times 15 = 3</math>, <math>\frac{2}{3} \times 15 = 2 \times \frac{1}{2} \times 15 = 2 \times 3 = 6</math></li> <li>Work out how many <math>\frac{1}{2}</math>s in 15, how many <math>\frac{1}{3}</math>s in 15, how many <math>\frac{2}{5}</math>s in 1 etc.</li> </ul>	<p style="font-size: small; text-align: center;">To calculate <math>\frac{1}{2} \times \frac{1}{4}</math>, find <math>\frac{1}{2}</math> of a rectangle/array, then divide that <math>\frac{1}{2}</math> into <math>\frac{1}{4}</math>s. So <math>\frac{1}{2}</math> of <math>\frac{1}{4}</math> is <math>\frac{1}{8}</math></p>															
		Pupils should use a variety of images to support their understanding of multiplication with fractions. This follows earlier work about fractions as operators (fractions of), as numbers, and as equal parts of objects, e.g. as parts of a rectangle.															
Links from other strands	<p>Identify common factors, common multiples and prime numbers.</p> <p>Use their knowledge of the order of operations to carry out calculations involving the four operations.</p> <p>Solve problems involving addition, subtraction, multiplication and division.</p> <p>Explore the order of operations using brackets; e.g. <math>2 + 1 \times 3 = 5</math> and <math>(2 + 1) \times 3 = 9</math>.</p> <p>Fractions, decimals and percentages including equivalences in different contexts.</p> <p>Solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts.</p> <p>Solve problems involving the calculation of percentages (e.g. of measures, such as 15% of 360) and the use of percentages for comparison.</p> <p>Solve problems involving similar shapes where the scale factor is known or can be found.</p> <p>Solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.</p> <p><b>Algebra</b> including formulae, linear number sequences, combinations of variables.</p> <p><b>Measurement</b> including solving problems with conversion of units, decimal notation, area and volume.</p> <p><b>Statistics</b> including pie charts, line charts and calculating the mean.</p>																

# Upton Calculation Policy for division: YEAR 3

Mental calculations	<p>Pupils should be taught to recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables.</p> <p>Pupils develop efficient mental methods, for example, using commutativity and associativity (e.g. <math>4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240</math>) and multiplication and division facts to derive related facts.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <math>36 \div 3 = 12</math>  <math>30 \quad 6</math>  <math>30 \div 3 = 10 \quad 6 \div 3 = 2</math>  <math>\quad \quad \quad +</math> </div> <div style="text-align: center;"> </div> </div>
Written calculations	<p>Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, progressing to formal written methods.</p> <div style="display: flex; justify-content: space-between; align-items: center; margin-top: 10px;"> <div style="border: 1px solid orange; padding: 5px; background-color: #fff9c4;"> <p>New written methods can be modelled alongside mental or informal methods to ensure understanding.</p> </div> <div style="border: 1px solid gray; padding: 5px; background-color: #e0e0e0;"> <p>"I know <math>6 \div 3 = 2</math>, so <math>60 \div 3 = 20</math>." "I know <math>12 \div 3 = 4</math>, so <math>120 \div 3 = 40</math>."</p> </div> <div style="text-align: center;"> <math>120 \div 3</math>  </div> </div>
Supporting representations	<p>Use a range of concrete and pictorial resources, including:</p> <div style="display: flex; justify-content: space-between; align-items: flex-start;"> <div style="width: 30%;"> <p>98 <math>\div</math> 7 = 14</p> <p>7 <math>\times</math> 4 = 28      7 <math>\times</math> 10 = 70</p> <p>Answer is 14</p> </div> <div style="width: 30%; text-align: center;"> <p>63 <math>\div</math> 3 equals three groups of 2 tens and a one.</p> </div> <div style="width: 30%;"> <p>21</p> <p><math>3 \overline{) 63}</math></p> <p>I know that <math>63 \div 3 = 21</math>, so <math>63 \div 21 = 3</math>, and <math>21 \times 3 = 63</math>, so <math>3 \times 21 = 63</math>.</p> </div> </div> <div style="margin-top: 10px;"> <p>An image for <math>56 \div 7</math></p> <p>The array is an image for division too</p> </div> <div style="margin-top: 10px; border: 1px solid orange; padding: 5px;"> <p>How could I calculate <math>72 \div 3</math> ?</p> <p>Informal exploration with manipulatives supports the progression to formal written methods—which is continued in Year 4.</p> </div> <div style="text-align: center; margin-top: 10px;"> <p>24</p> <p><math>3 \overline{) 72}</math></p> </div>
Fractions	<p>Recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10.</p> <p>Recognise and show, using diagrams, equivalent fractions with small denominators.</p> <p>Recognise, find and write fractions of a discrete set of objects: Unit fractions and non-unit fractions with small denominators.</p> <div style="display: flex; justify-content: space-around; align-items: center; margin-top: 10px;"> <div style="text-align: center;"> <p>Equivalent Fractions</p> </div> <div style="text-align: center;"> <p>Fractions Of Numbers</p> </div> </div>
Links from other strands	<p>Solve problems, including missing number problems, involving division, including measuring and scaling problems (e.g. four times as high) and correspondence problems in which <math>n</math> objects are connected to <math>m</math> objects.</p> <div style="display: flex; justify-content: space-between; align-items: flex-start; margin-top: 10px;"> <div style="width: 60%;"> <p>This is the ground plan of a room.</p> <p>Scale: 1 mm on the plan means 10 cm in real life.</p> <p>a) In the plan, measure the</p> <p>i) width of the room: .....</p> <p>ii) length of the room: .....</p> </div> <div style="width: 35%;"> </div> </div>

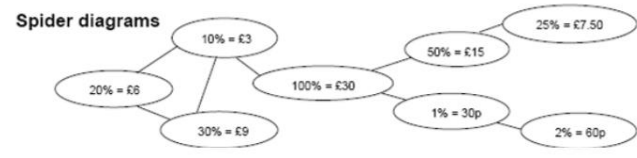

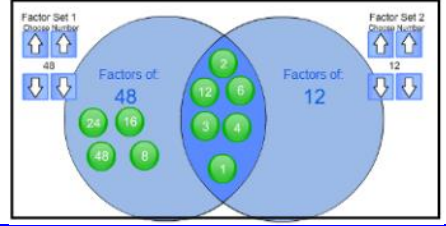

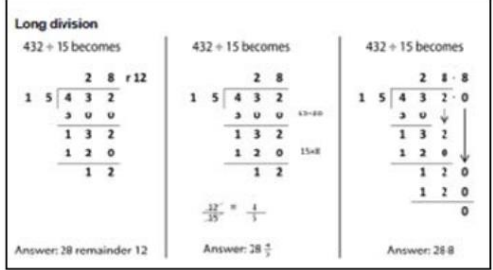

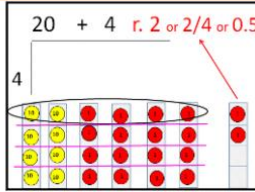

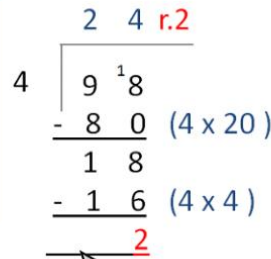

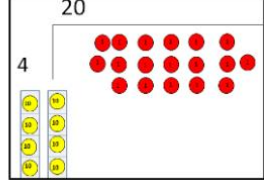

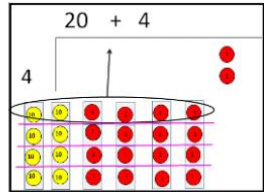

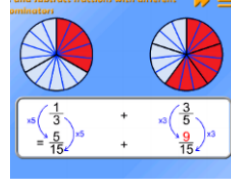

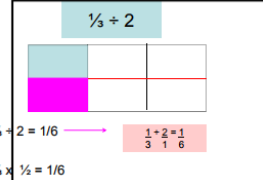

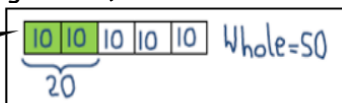

# Upton Calculation Policy for division: YEAR 4

Mental calculations	<p>Pupils should be taught to recall and use multiplication and division facts up to <math>12 \times 12</math>. Use place value, known and derived facts, to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1. Recognise and use factor pairs and commutativity in mental calculations.</p> <div style="float: right; border: 1px solid black; border-radius: 50%; padding: 10px; width: fit-content;"> <p>I know that  <math>6 \div 3 = 2</math>, so  <math>600 \div 3 = 2</math></p> </div> <div style="margin-top: 10px;"> <p>Using known facts and blank arrays to calculate <math>176 \div 8</math>.</p>  <p style="text-align: right;"><math>176 \div 8 = 22</math></p> </div> <p><i>Pupils practise mental methods and extend this to three-digit numbers to derive facts.</i></p>
Written calculations	<p>Divide two and three-digit numbers by a one-digit number using formal written layout. Pupils to become fluent in the formal written method of short division with exact answers.</p> <div style="border: 1px solid orange; padding: 5px; margin: 10px 0;"> <p>Revert to expanded methods if children find formal calculation difficult.</p> </div> <div style="text-align: right; margin: 10px 0;"> <math display="block">\begin{array}{r} 197 \\ 3 \overline{)591} \\ \underline{3} \phantom{0} \\ 29 \phantom{0} \\ \underline{27} \phantom{0} \\ 21 \\ \underline{21} \\ 0 \end{array}</math> <p><math>591 \div 3 = 197</math></p> </div>
Supporting representations	<div style="display: flex; justify-content: space-between;"> <div style="width: 30%;"> <p><math>693 \div 3</math></p> <p>Children can work in pairs: child A constructs the array (dividing manipulatives into 3 rows), child B checks it and records this in a formal, short division format.</p> </div> <div style="width: 30%;"> <p>By working through larger number calculations with manipulatives, children gain experience of exchange (re-partitioning) within division algorithms.</p> </div> <div style="width: 30%;"> <p><math>492 \div 4</math></p> <p>By the end of Year 4, children need to have encountered remainders in a number of contexts. Pupils can be introduced to remainders using known facts: e.g. <math>13 \div 4</math>; and then progress to larger numbers. (See below).</p> </div> </div> <div style="margin-top: 20px;"> <p><math>200 \div 6 = 33 \text{ r.} 2</math></p>  <div style="display: flex; justify-content: space-around; align-items: center; margin-top: 10px;">   <div style="text-align: right;"> <p><math>30 + 3</math></p> <p>Remainder 2</p> </div> </div> <p style="text-align: right; background-color: orange; padding: 2px; margin-top: 5px;">Money can be used instead of place value counters.</p> </div>
Fractions	<p>Recognise that hundredths arise from dividing an object into 100 equal parts dividing tenths by 10. Recognise and show, using diagrams, equivalent fractions. Solve problems involving increasingly harder fractions to calculate quantities, and fractions to divide quantities, including non-unit fractions where the answer is a whole number. Find the effect of dividing a one or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths.</p> 
Links from other strands	<p>Convert between different units of measure (e.g. km to m; hour to minute). Estimate, compare and calculate different measures, including money in pounds and pence. Solve problems, including missing number problems, involving division, including measuring and scaling problems (e.g. four times as high) and correspondence problems in which <math>n</math> objects are connected to <math>m</math> objects.</p>

# Upton Calculation Policy for division: YEAR 5

Mental calculations	<p>Pupils should be taught to:                  Divide whole numbers and those involving decimals by 10, 100 and 1000.                  Divide numbers mentally drawing upon known facts.                  Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers.</p> <div style="display: flex; justify-content: space-between; align-items: flex-start;"> <div style="border: 1px solid #00aaff; border-radius: 10px; padding: 5px; width: 20%;"> <p>If <math>42 \div 6 = 7</math>.</p> <p style="text-align: center;"><math>\div 10</math>     <math>\div 10</math></p> <p style="text-align: center;">Then <math>4.2 \div 6 = 0.7</math></p> </div> <div style="border: 1px solid #00aaff; padding: 5px; width: 40%;"> <p style="text-align: center;">Number lines</p> </div> <div style="border: 1px solid #00aaff; padding: 5px; width: 20%;"> <p style="text-align: center;">Factorising</p> <p style="text-align: center;"><math>480 \div 15</math></p> <p style="text-align: center;"><math>= 480 \div 5 \div 3</math></p> </div> </div> <p style="margin-top: 10px;"><i>Pupils apply all the multiplication tables and related division facts frequently and use them confidently.</i></p> <div style="border: 1px solid #00aaff; border-radius: 10px; padding: 5px; width: fit-content; margin-left: auto; margin-top: 10px;"> <p>"I know that the answer to <math>138 \div 6</math> will be close to 20, because <math>2 \times 6 = 12</math>, so <math>20 \times 6 = 120</math>."</p> </div>
Written calculations	<p>Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context.</p> <div style="border: 1px solid #00aaff; padding: 5px; margin-bottom: 10px; width: fit-content;">                 Revert to expanded methods if children find formal calculation difficult.             </div> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Short division</p> <p><math>98 \div 7</math> becomes</p> <math display="block">\begin{array}{r} 14 \\ 7 \overline{) 98} \end{array}</math> <p>Answer: 14</p> </div> <div style="text-align: center;"> <p><math>432 \div 5</math> becomes</p> <math display="block">\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \end{array}</math> <p>Answer: 86 remainder 2</p> </div> <div style="text-align: center;"> <p><math>496 \div 11</math> becomes</p> <math display="block">\begin{array}{r} 45 \text{ r } 1 \\ 11 \overline{) 496} \end{array}</math> <p>Answer: <math>45 \frac{1}{11}</math></p> </div> </div>
Supporting representations	<div style="display: flex; justify-content: space-between;"> <div style="border: 1px solid #00aaff; padding: 5px; width: 25%;"> <p>Can we divide this <math>100</math> token into 6 equal groups?, then we must exchange it for ten <math>10</math> tokens. Can we divide into 6 groups now?</p> </div> <div style="text-align: center;"> <p>Short division with exchange.</p> </div> <div style="border: 1px solid #00aaff; padding: 5px; width: 25%;"> <p>Practical experience with manipulatives is vital for children to talk through the language of division e.g. <i>exchange, remainder</i>; and to embed conceptual understanding.</p> </div> </div> <div style="margin-top: 10px;"> <p>Understanding remainders.</p> </div> <div style="margin-top: 10px;"> <p style="text-align: center;"><math>20 + 4 \text{ r } 2</math></p> </div> <div style="margin-top: 10px;"> <p><math>2</math> out of a whole group of <math>4 = \frac{2}{4} = \frac{1}{2} = 0.5</math></p> <p><math>98 \div 4 = \frac{98}{4} = 24 \text{ r } 2 = 24 \frac{1}{2} = 24.5</math></p> <div style="border: 1px solid #00aaff; border-radius: 10px; padding: 5px; width: fit-content; margin-left: auto; margin-top: 10px;"> <p>What is the same? What's different about the ways that these remainders are expressed?</p> </div> </div>
Fractions	<p>Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements <math>&gt; 1</math> as a mixed number.</p> <p>Pupils connect equivalent fractions <math>&gt; 1</math> that simplify to integers with division and other fractions <math>&gt; 1</math> to division with remainders.</p> <p>Pupils connect multiplication by a fraction to using fractions as operators (fractions of) and to division.</p> <p>Pupils should make connections between fractions, percentages and decimals.</p>
Links from other strands	<p>Pupils use all four operations in problems involving time and money, including conversions using decimal notation, including scaling (e.g. 1.5 times larger).</p> <p>Calculate and compare the area of rectangles (including squares). <i>'this square is 4 times smaller'</i></p> <p>Solve problems, including missing number problems, involving division, including measuring and scaling problems and correspondence problems in which <math>n</math> objects are connected to <math>m</math> objects.</p> <p>Solve problems including a combination of addition, subtraction, multiplication and division.</p> <p>Recognise and use square numbers and cube numbers and the notation for square (2) and cube (3).</p>

# Upton Calculation Policy for division: YEAR 6

Mental calculations	<p><b>Pupils should be taught to:</b>  <b>Perform mental calculations, including with mixed operations and large numbers.</b>  <b>Use their knowledge of the order of operations to carry out calculations involving the four operations.</b>  <b>Identify common factors, common multiples and prime numbers.</b></p> <div style="border: 1px solid black; padding: 5px; margin: 10px auto; width: fit-content;"> <p><i>I know that 366 will divide by 6 because it has 2 and 3 as factors.</i></p> </div>	<p><b>Spider diagrams</b></p>  
Written calculations	<p><b>Divide numbers up to 4 digits by a two-digit number using the formal written methods of long and short division and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context.</b></p> <div style="border: 1px solid orange; padding: 5px; margin: 10px auto; width: fit-content;"> <p>Revert to expanded methods if children find formal calculation difficult.</p> </div>	<p><b>Long division</b></p> 
Supporting representations	<p>To introduce the long division model, use a calculation which can be represented both with manipulatives and by a short division algorithm. Use questioning and discussion to compare written methods.</p> <div style="border: 1px solid orange; padding: 5px; margin: 10px auto; width: fit-content;"> <p><math>£1362.72 \div 40 = ?</math>  <math>£1362.72 \div 4 = £340.68</math>  <i>[½ and ½ again.]</i>  <math>£340.68 \div 10 = £34.068</math>  <i>which rounds to £34.07.</i></p> </div> 	   <div style="border: 1px solid gray; border-radius: 50%; padding: 10px; display: inline-block; margin: 10px;"> <p>What's the same? What's different?</p> </div>
Fractions	<p>Use common factors to simplify fractions          Compare and order fractions, including fractions &gt; 1          Add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions.          Divide proper fractions by whole numbers (e.g. <math>1/3 \div 2 = 1/6</math>)          Associate a fraction with division and calculate decimal fraction equivalents (e.g. 0.375).  <i>Pupils use their understanding of the relationship between unit fractions and division to work backwards.</i></p> <div style="border: 1px solid gray; padding: 5px; margin: 10px auto; width: fit-content;"> <p><math>2/5</math> of a number is 20. What is the number?</p> </div>	  
Links from other strands	<p>Pupils are introduced to the division of decimal numbers by one-digit whole numbers initially, in practical contexts involving measures and money. They recognise division as the inverse of multiplication. Pupils also develop their skills of rounding and estimating. This includes rounding answers to a specified degree of accuracy and checking the reasonableness of their answers. Solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate. Use, read, write and convert between standard units... using decimal notation to up to 3 decimal places. Interpret and construct pie charts and line graphs and use these to solve problems. Calculate and interpret the mean as an average. Solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts.</p>
